EDUCATION

NATIONAL UNIVERSITY OF SINGAPORE

Aug 2024 - Present

Bachelor of Computing in Computer Science

- Double Major in Computer Science and Statistics
- Specializations- Algorithms & Theory, Artificial Intelligence
- Relevant Coursework: Programming Methodology, Discrete Structures, Data Structures and Algorithms, Digital Ethics and Data Privacy, Probability and Statistics, Software Engineering, Design and Analysis of Algorithms

WORK EXPERIENCE

aBetterMe, Software Engineering Intern

Aug 2026 - Present

- Built the meal-photo nutrition service behind aBetterMe's WhatsApp health coach, from Gemini vision recognition to database-backed macros
- Developed hybrid search matching dishes against 2,689 SG FoodID records and USDA data, returning confidence-scored results per item
- Deployed the backend on Firebase Functions, Storage and Cloud Tasks with CI on every push, and integrated it into the coach's meal logging

NUS Fintech Lab, Research and Development Intern

Feb 2026 - Present

- Designed blockchain-based content provenance system differentiating AI- and human-generated content via decentralised identity; built full-stack DApp integrating smart contracts and backend authentication services
- Built full-stack venture progress tracker (React 18/TypeScript, Go/Gin, PostgreSQL 16) serving 3 role-based portals across 24+ views, reducing monthly mentor review cycle by ~60% over prior email-and-spreadsheet workflows
- Automated push-to-deploy CI/CD: Go backend built into Docker, pushed to AWS ECR, and rolled over to EC2

GoldLabel Enterprise, Software Engineer

Feb 2026 - Aug 2026

- Built an app that scans medication labels and regenerates them as pictograms in 13 languages, improving medication safety for low-literacy patients; deployed on both Android and iOS
- Engineered an OCR-to-LLM pipeline (Google Cloud Vision + Gemini) with a safety-constrained prompt design and server-side validation layer, restricting model output to a verified pictogram set to eliminate hallucinated medical instructions
- Frontend- React Native, Typescript, Javascript; Backend- Node.js, Express, Supabase, PostgreSQL, Google Cloud Vision

National University of Singapore, Development Intern

Oct 2025 - June 2026

- Reduced per-case admin time by 75% by developing Power Apps forms and automating workflows for case management system for academic offences
- Engineered Power Automate flows integrating Dataverse, SharePoint, Outlook and notification systems
- Designed Power BI dashboards delivering actionable insight on case trends and turnaround statistics

Indian Institute of Science, Research Intern

May 2025 - Aug 2025

- Performed anomaly detection research on smart meter data sampled at 15-minute intervals across 120 households in 5 cities over 2.5 years
- Built and deployed web-app for visualization, anomaly handling and data manipulation; containerized with Docker
- Conducted a benchmark study comparing classical ML models (Random Forest, XGBoost) and time series foundation models (Arsenal, ROCKET, Lightning) for appliance-level energy disaggregation

PROJECTS

Canon, Lead Developer

Aug 2026 - Present

- Built a full-stack Next.js app that extracts decisions, promises, debts and open questions from WhatsApp and Telegram exports, enforcing a cite-or-drop rule that discards any generated entity referencing a message that doesn't exist, backed by 110 unit tests
- Engineered a redact-before-extract pipeline stripping phone numbers, emails, NRICs and cards before data reaches the LLM, with deterministic dedupe and contradiction resolution and statistical persona fingerprinting per speaker
- Frontend- Next.js, React, TypeScript, Tailwind CSS; Backend- Next.js API routes, OpenAI API, Zod

Football Statistics Dashboard, Lead Developer

Jan 2026 - May 2026

- Built a full-stack football analytics dashboard featuring live match tracking, animated historical replay, referee analysis, injury tracking, and player comparison across 3 user-pinned teams
- Implemented a Dixon-Coles Poisson model computing per-team attack/defence ratings and win/draw/loss probabilities via an 8x8 joint scoreline matrix, with weekly automated retraining
- Engineered a 5-tier Redis caching layer (30s to 24h TTLs, permanent for completed match timelines) with a daily rate limiter
- Frontend- React, Vite, TailwindCSS, Recharts, D3; Backend- FastAPI, SQLAlchemy, Redis, PostgreSQL; ML Stack- Poisson, scikit-learn

FauxFinder, Lead Developer

Sep 2025 - Oct 2025

- Built a full-stack deepfake detection platform (Node.js/Express + PyTorch) supporting dynamic registration of any Hugging Face ViT model
- Exposed 7-endpoint REST API enabling single-model and concurrent multi-model analysis across 6 file formats (JPEG, PNG, MP4, AVI, MOV); rendered per-model confidence scores and accuracy comparisons
- Frontend- HTML5, CSS3, JS, Chart.js; Backend- Node.js, Express.js, Multer; ML Stack- PyTorch, HuggingFace Transformers, OpenCV

LEADERSHIP

NES Foundry, Research Analyst

Aug 2025 - May 2026

- Performed research on startup trends in the fields of EdTech, Engineering & Robotics and Logistics

Developer Group @ NUS Computing, Internal Lead

Aug 2024 - May 2026

- Led a 50-member team in planning and executing Developer Group events, including Welcome Dinner, Hack4Good, and Annual Merchandise Sale, with 300+ total participants

NUS Mathematics Society, Assistant Project Director

Aug 2024 - May 2025

- Planned agenda and logistics and drafted proposals for events including ProblemATHic, DSA Alumni Sharing and Halloween Sale, with 100+ total participants

The Modernite, Lead Editor

Jan 2020 - May 2024

- Led 15 students over two editions of high school annual magazine; oversaw writing, editing and designing of articles

SKILLS

- Languages: Java, Python, JavaScript, TypeScript, Go, C, R, SQL (MySQL, PostgreSQL), HTML, CSS, Solidity
- Frameworks & Libraries: React.js, React Native, Next.js, Node.js, Express.js, FastAPI, Gin, SQLAlchemy, Tailwind CSS, Dash, Plotly, PyTorch, Hugging Face Transformers, Scikit-Learn, Pandas, NumPy, OpenCV
- Tools & Platforms: Docker, AWS (EC2, ECR), Supabase, PostgreSQL, Redis, Power BI, Power Automate, Power Apps, Dataverse, SharePoint, Google Cloud Vision, Vercel, Railway, Git, Excel
